**Managed Services**

Focus on your business - Not your technology

**Governance Audit**

## Reducing the cost of Security and Compliance

Are you responsible for the ongoing effectiveness of your security strategy and compliance audits?

A primary concern for any business owner is the guardianship of customer and business data from increasing external threats to security, and tougher compliance requirements in regulated industries.

A Managed Audit will keep you one step ahead of potential attackers by giving you a comprehensive way to regularly assess and report on possible vulnerability, configuration and compliance related issues on your network.

### Benefits of Managed Audit

#### None intrusive

We will perform a scan of your entire network without interrupting your day-to-day business. This assessment will capture established security controls along with any vulnerabilities or configuration violations that impact the network.

#### Prioritise what's important

A detailed report offers risk scoring prescriptive guidance enabling you to address the most critical issues first, to secure your environment.

#### Address issues quickly

In addition to prioritising problems the audit also provides prescriptive advice to assist in remediating the found issues. This helps to accelerate the time to address identified issues. Its like having your own consultant, at a fraction of the cost!

#### Reduce operating costs

A security incident can paralyse your business. Failure to meet regulatory requirements can lead to hefty fines. Identifying and eliminating these risks will save you money!

## Total peace of mind

Knowing that your network is protected from the latest known vulnerabilities and you are partnered with a team of experts that can protect your network 24x7.

### Key Features

#### Industry Leading software

Knowing you are protected from the latest known vulnerabilities with an intelligently updated audits database that include a 48 hour service level agreement for critical vulnerabilities.

#### Prioritise and streamline remediation

Risk scoring and prescriptive guidance on issues through executive and task specific reporting speeds time to repair issues.

#### Vulnerability landscape

Goes beyond application security identifies patch, configuration, hardware and operating system level vulnerabilities.

#### View Trends and remediate

Detailed reports provide prescriptive guidance and viewing trends over time allowing you to see how network security and compliance is being continually improved.

#### Support and guidance

The assessment is the starting point. Security, configuration and compliance are always changing. We ensure your IT assets and infrastructure are protected.

## Why Choose a Managed Audit from Not-a-Geek?

### Reduced Costs

- Prevention is less costly than remediating problems.
- Fines for non-compliance in regulated industries can be avoided.

### Improved Productivity

- Multiple scans can be run simultaneously if needed, saving you time.
- Software only solution—no hardware installation or configuration required.

### Increased Awareness

- Your network and devices are frequently monitored so you are alerted if a problem arises.
- Audit database is updated daily with the latest threat and vulnerability vectors.

### Increased Confidence

- Knowing that your network and devices are optimised to provide maximum protection.
- Minimising the risk of surprise from a security incident or compliance issue.
