

Why Choose Managed Backup from Not-a-Geek?

Reduced Costs

- Less storage space required.
- Less bandwidth needed.
- Recover to dissimilar hardware if needed.

Improved productivity

- Back up more data in less time.
- Minimise downtime with faster restore times.
- Restore a single file or a complete volume from any point in time you have data backed up.

Increased awareness

- Backups are constantly monitored so you are promptly alerted if there is a problem.
- Detailed monthly reports on backup status.

Increased confidence

- Regular backups minimise business downtime in the event of a data loss.
- Backups are always scheduled and managed professionally.

Don't risk your business by being unprepared!

The Managed Backup solution from **Not-a-Geek** provides the skilled IT resources, domain expertise, centralised monitoring and management facilities and proactive approach to ensuring the protection of your data, and your business, against loss.

Available at the same cost as your existing backup product the **Not-a-Geek managed backup solution** is unbeatable value.

Managed Services

Focus on your business - Not your technology

Monitored Backup

What would be the cost to your business if you lost critical data, even for a day?

Your business data is the lifeblood of your company and the amount you are collecting and storing is growing all the time. Imagine the impact if you lost a days data, a weeks data, a years data, due to inadequate or infrequent back-up processes. What would happen, could you recover?

A managed backup service from **Not-a-Geek** ensures that all files are automatically backed up as frequently as every 15 minutes if needed and it will likely cost less than your monthly phone bill. So, how much is your data worth?

Benefits of Managed Backup

Reduce your day to day operating costs

While most solutions require full backups periodically or in some cases daily, our solution only requires an initial full backup and then from that point stores only incremental file changes. Saving you money in storage space, data transfer costs and server load.

Safeguard business information

Since the solution takes backups as the data changes, you will be able to recover files, even older revisions.

Ensure Business Continuity

Backup up your most critical business applications to ensure that you can get quick access to restore systems that would have the most impact on your day-to-day operations if they were offline.

Increase productivity and decrease downtime

With our rapid restore capabilities, we will minimise the costs associated to lost productivity and downtime.

Detailed reporting Information

No longer will you be unsure of how well your data is

protected. We will provide you with reports monthly that let you know that your data is safe!

Total Peace of Mind

Doing regular backups is just one more thing to remember. Knowing that your business data is safe and being handled by professionals means you can focus on your business

Low cost of ownership

A fully managed data backup and restore solution for the same or less cost than a capital purchase that you have to manage yourself.

Key Features

Block level Infinite Incremental backup

Incremental means never having to do another full backup drastically reducing the backup time, storage space, network traffic, and the workload of your servers.

Recover your data to dissimilar hardware

Our solution performs a bare metal restore of your data to dissimilar hardware. You don't have to worry about purchasing that new server anymore!

Virtual server support

Backup your virtual servers with the same software that you use to backup your physical servers.

Supreme flexibility

Recover your data from nearly any point in time. Whether it is just one file or a full restore.

Full Transparency Through Reporting

Wide range of detailed reports are provided monthly to ensure that you know what is happening and that you can breathe easy knowing that your data is protected.

Fully Monitored System

We monitor the solution 24x7 to ensure it is always

working, and will act immediately if there is an issue.
